Konect™
Access software for small and mid-size businesses.

Your business must innovate, adapt, and respond faster than ever before. As an IT manager, this challenging environment increases the expectations and pressures to:

- deploy and support a variety of applications and multiple versions of those applications.
- maintain security across all computers, applications, and networks.
- provide seamless access to information and other business assets.
- support an increasingly remote and mobile workforce.

You are expected to balance these needs against the business priorities of keeping costs low and doing more with less in an already constrained environment.

Konect is the solution you need to address these challenges.

What is Konect?

Konect is a serverware solution for small and mid-size businesses that enables simplified networked resource management, deployment, security and remote access. Konect extends Microsoft's Terminal Services to manage these networked resources centrally while seamlessly presenting them within a user's local, remote or mobile computer desktop. Konect gives users fast and easy access to these networked resources through their existing desktop environment relieving the demands placed on IT administrators to train or retrain users on how to access these resources through other means such as a web page, portal, or traditional Terminal Services desktop delivery.

Konect's Innovative Delivery

Konect delivers each networked resource as a service to the user's desktop, completely eliminating the traditional second desktop normally associated with Terminal Services software. With Konect there is no second desktop for a user to deal with as all networked resources are integrated into the local desktop in the same exact manner as locally installed resources. Users simply use standard Windows-based desktop integration including.

- *Start Menu Items*: Networked resources appear in the clients' start menu on the client system.
- *Desktop Shortcuts*: Networked resources appear as standard desktop shortcuts on the client system.
- *File Explorer:* Networked files and data sources are seamlessly mapped into the user's Windows Explorer.
- *System Tray:* Networked resources appear in the user's desktop system tray providing smooth, quick access to the networked resources authorized for that user.

Konect
The Best Solution For Application Deployment And Support in Small and Mid-Size Businesses.

Konect is a highly cost effective, feature-rich, and scalable solution for small and mid-size businesses. With its innovative delivery of server-hosted applications, files, data sources and web resources, Konect eliminates the challenges you may face with other traditional terminal services applications:

- *No more desktop confusion.* Users work from a normal desktop environment to access local and server-based resources, never having to flip back and forth between local and server desktops.

- *Reduced training times and elimination of re-training.* Konect integrates into your users' normal desktop environment, becoming an accessible resource like any other on their desktop.

- *Seamless local and remote accessibility.* Konect gives your users secure, easy and instant access to the tools and information they need from anywhere at anytime.

- *Simplified security administration.* Konect centralizes security for accessing resources and allows you to easily ensure that only the right people have the right access to the resources they need.

- *Leverages existing infrastructure.* Konect requires no additional hardware and can easily integrate into your company's existing infrastructure.

Konect enables your small and mid-size business with the access serverware needed to deploy server-hosted applications and resources to users, to support an increasingly mobile workforce, to enable the use of remote offices, and to simplify the administration and security of your business' critical applications and resources.

Konect Key Benefits

Konect provides your small or mid-size business with many benefits.

Cost effective access serverware solution. There are no other products on the market today that can deliver the robust access serverware capabilities of Konect at the same low cost.

Rapid, centralized deployment of networked resources. Konect uses a wizard-driven approach to assist administrators in deploying networked resources and providing appropriate security.

Simple maintenance and support. With Konect you can eliminate the need to install software on your users' computers. And Konect is quick to set up and easy to use, simplifying the time, cost, and effort required by your IT group to manage and administer it and all of your networked resources.

Konect Solutions

Konect solutions support then needs of your small or mid-size business.

Need: Deploy multiple applications and versions with limited resources.
Solution: Konect centralizes the deployment and management of your networked resources, allowing you to control all interaction between your users and these resources through a simple administrative console.
Benefits:
- Reduce the costs and demands of deploying resources and maintaining user security.
- Reduce the costs of IT infrastructure.
- Reduce the costs of IT staff needs or redeploy staff to more critical IT projects.

Need: Connect remote offices and partners with a central location.
Solution: Konect allows your business to centrally manage and deploy networked resources, such as server-hosted applications, files, data sources, web resources and services, over the Internet to all users regardless of their location.
Benefits:
- Reduce costs of application provisioning by deploying applications once for multiple locations.
- Central application deployment, maintenance, and support reduces strain on IT staff when supporting dispersed users.
- Simplified data backup and recovery with centralized resources.

Need: Enable and support an increasingly remote and mobile workforce.
Solution: Konect provides your users with access to networked resources, regardless of location, time, and connectivity.
Benefits:
- Workers can maintain productivity while meeting the demands of customers, suppliers, and partners.
- Provide existing server-based applications without need to redevelop for the Windows platform.
